

A function is a block of code which only runs when it is called. You can pass data, known as parameters, into a function. A function can return data as a result. Creating a

Function In python a function is defined using the def keyword Example

Get your own python server def myfunction printhello from a function calling a function to call a

function, use the function name followed by parenthesis Example def myfunction

printhello from a function myfunction

Arguments Information can be passed into functions as arguments. Arguments are

specified after the function name, inside the par A function is a block of code which only

runs when it is called. You can pass data,
